

cGMP Oligonucleotides

Custom solutions for clinical, pharmaceutical, food safety and animal health industries.

IVD and Molecular Dx

Quality and functional testing to ensure the lot-to-lot consistency you require.

OEM Kit Manufacturing

Wide range of custom formulations, kitting solutions, 3rd party labelling, functional QC, and stability programs.

Analytic Specific Reagents

Highly standardised process controls and customised solutions tailored to your project needs and budget.

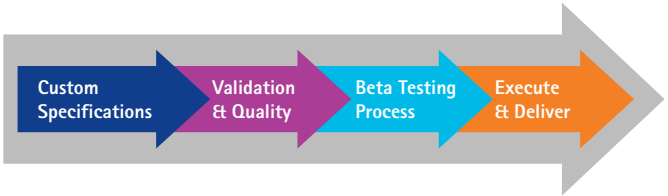

FDA 3009882691

Approved for the manufacture of ASRs for use in IVD products.

Reliable – Reputable – Replicable.

Eurofins Genomics is a certified manufacturer of premium quality oligonucleotides for in vitro diagnostics and ASR applications for all industries.

Advantages

- Regulatory compliance
- Full process traceability
- Customised product QC criteria
- Dedicated cGMP account manager
- Consistent lot-to-lot reproducibility
- Highly standardised process controls

Features

SYNTHESIS	PURIFICATION	FORMULATIONS
<ul style="list-style-type: none">• µg to mid-scale production• All purifications available• Optional dedicated purification columns• Custom mixes for bases and backbones• Modifications including your bespoke molecules	<ul style="list-style-type: none">• PAGE• Dual HPLC• Dual HPLC/PAGE• Reverse-phase HPLC• Reverse-phase cartridge• Optional dedicated purifications	<ul style="list-style-type: none">• Flexible packaging options• Customised branding• OEM kit manufacturing• Defined requirements, forecasts, and pricing guarantees with a single agreement

Quality Assurance

Eurofins Genomics has a commitment to providing the highest quality product and services to meet your needs.

- FDA compliant (CFR, title 21, part 820)
- Product quality control by
 - Quantitation
 - Mass spectroscopy
 - Analytical HPLC
 - Capillary gel electrophoresis (CGE)
- Product stability testing options
- Open door audit policy
