

ONCOLOGY SOLUTIONS

 Experts in FFPE and
liquid biopsies

WORKING WITH CIRCULATING TUMOR DNA OR TISSUE BIOPSIES? OUR NGS PRODUCTS DEDICATED TO ANALYSE CANCER GENES ARE AVAILABLE FOR CELL-FREE DNA SAMPLES AS WELL AS FOR SOLID TUMOR BIOPSIES.

TISSUE / FFPE SAMPLES

INVIEW Oncoprofiling (728 genes)

Combines all genes, promotor regions, miRNAs, extra-exonic variants and gene fusions from 60 independent panels and therefore offer an all-in-one product to analyse your oncology samples.

INVIEW Exome

Our best in class exome sequencing product using the Agilent SureSelect V8 enrichment kit, will provide you with highest quality data for your exome project.

Clinical Research Exome CREv4

Bridging the gap between whole genome sequencing and whole exome sequencing.

LIQUID BIOPSY SAMPLES

Non-invasive screening samples can easily be analysed with our INVIEW Liquid Biopsy products.

INVIEW Liquid Biopsy Oncoexome

Is the first non-invasive service to provide researchers and clinicians an overview of all protein-coding regions in the genome of a suspected cancer patient.

INVIEW Liquid Biopsy Oncoprofiling (728 genes)

Offers the most comprehensive cancer gene panel testing (728 genes) of liquid biopsy samples in the world.
